

# Application Brief

## **CRACKERS**

Let's travel back in time to the early 1800s when crackers made their flavourful debut. Since then, these crispy delights have delighted snack lovers worldwide. These versatile baked snacks, loved for their crispiness and endless toppings, are the perfect companion for any occasion.

# Ensuring crackers quality and improve your process with data analytics

SENSURE offers a wide range of advanced technologies that help crackers producers optimise their production processes and maintain the highest levels of product quality. The systems allow for the identification of defects, even at high speed and using different technologies (2D cameras, 3D laser profilometers, thermal cameras, etc.), and reject the non-compliant products.

Over the years, SENSURE has installed many solutions: from vision systems for product data collection and analytics, to complete solutions that include automatic rejection (with air nozzles, traps, etc.) of non-compliant products.
